REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The subject matter of the independent claim could either not be found or was not suggested in the prior art of record. The subject matter not found was a breast-pump with a breast-shield to be connected to the user (see remarks dated 8/2/05 page 4), and wherein the pumping mechanism comprises a first and second expansible chamber, wherein each expansible chamber has a flexible diaphragm that is moveable relative to the base member. The base member is connected to the drive train, which is connected to the motor through a specific arrangement of parts. The movement of each diaphragm relative to the base member creates a negative vacuum pressure, and thus creates the suction (see remarks dated 8/2/05, page 4).

The independent claims also include other patentable subject matter in combination with the other elements or steps of the claim not mention in the above paragraph.

The examiner would also like to note that is would not be a mere obvious modification for one of ordinary skill in the art to duplicate the number of expansible chambers and flexible diaphragms in the pumping mechanisms because of the size of the embodiment and the fact that each movement of the flexible diaphragm would create a suction effect and thus extract milk from the mother. Therefore, there would be no loss movement, thus making the claimed embodiment more efficient over the prior art (see remarks dated 8/2/05, pages 4 &5).
